Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 February 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6, 14, 19-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Frizzell (US Patent No 821232).

Regarding claims 6, & 14, Frizzell discloses assembling a fence section comprising rails (11) & pickets (12) connected to each other, and wrapping a band (16) around said fence section forming a loop that extends to wrap around the rails to secure the picket together (column 1, lines 33+ & Figure 1).

Regarding claims 19-20, Frizzell discloses additional pickets (12) secured by additional bands (16) wrapping around the fence sections to secure the rails & pickets (Figure 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5, 7-13, 15-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frizzell in view of Applicant's Admitted Prior Art (AAPA).

Art Unit: 3726

Regarding claims 1, 5, 8-13, Frizzell discloses the claimed invention as discussed above, except for the use of a banding machine.

AAPA discloses that the use of a banding machine is well established within the art, and commercially available from several distributors (page 4, line 1). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to form a fence section as disclosed by Frizzell with the use of a commercially available banding machine as taught by AAPA in order to increase the speed & ease of the banding process.

Regarding claims 2-4, 7, 15-18 Frizzell discloses the claimed invention except for explicitly stating that the rails contain channels for receiving the pickets; and that the components are made of plastic.

AAPA discloses that channels formed in the rails to receive the pickets is a concept old and well known in the art (paragraph 006). Additionally, forming the components of plastic is considered merely a design choice and would have been readily apparent to an artisan of ordinary skill in the art. Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to form a fence section as disclosed by Frizzell, having channels in the rails, and formed of plastic as taught by AAPA in order to form a more secure & durable fence section.

Art Unit: 3726

Conclusion

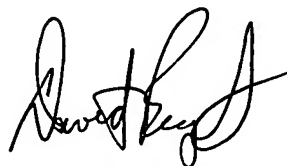

The prior art made of record on the attached PTO-892, and not relied upon is considered pertinent to applicant's disclosure.
